EDITORIAL

It is with great pleasure and a deep sense of academic fulfillment that we present the maiden edition of the Public Sector Accounting and Finance Journal (PSAFJ), published by ANAN University, Kwall. This inaugural issue marks a significant milestone in the University's commitment to advancing scholarship, policy, and practice in the field of public sector accounting, finance, and governance.

In an era when nations are striving for transparency, accountability, and fiscal sustainability, the role of public sector accounting and finance has never been more critical. The journal is therefore conceived as a platform for intellectual engagement, rigorous research, and policy discourse that contribute meaningfully to the strengthening of public financial management systems, good governance, and sustainable development in Nigeria and beyond.

This maiden edition features ten scholarly articles drawn from a wide spectrum of research interests and methodologies within the field. The papers collectively address critical issues ranging from public sector financial reporting and accountability, budgeting reforms, internal control mechanisms, audit quality, fiscal transparency, to the application of emerging technologies in public finance management. Each contribution reflects the authors' depth of research and commitment to the continuous improvement of public sector governance and accountability.

COLLEGE OF PUBLIC SECTOR ACCOUNTING
ANUK Public Sector Accounting and Finance Journal (APSAFJ)

THE OBJECTIVE OF THE JOURNAL

To provide a platform for researchers and academics to publish research papers and articles within the research domains of public sector accounting, public finance, public economics, environmental, oil and gas accounting, public financial management, taxation and fiscal policy, public policy and finance, macroeconomics and development, public treasury management, and other related areas..

ETHICS AND POLICIES

1. Publication Ethics

At the ANUK Public Sector Accounting and Finance Journal (APSAFJ), we uphold the highest standards of publication ethics to ensure the integrity and quality of our scholarly outputs. We are committed to ethical publishing practices, guided by the principles of the **Committee on Publication Ethics (COPE)**. All authors, reviewers, and editors are expected to adhere to the following ethical standards:

- **Plagiarism:** All submitted manuscripts undergo plagiarism detection using [Plagiarism Detection Tool, e.g., Turnitin]. Manuscripts found to contain significant plagiarism, including self-plagiarism, will be rejected. Authors are encouraged to properly cite and attribute all sources.
- **Authorship:** Only individuals who have significantly contributed to the research and manuscript preparation should be listed as authors. Ghostwriting, guest authorship, and other forms of unethical authorship are strictly prohibited.
- **Research Misconduct:** Fabrication, falsification, or misrepresentation of data are unacceptable. Any suspected cases of research misconduct will be investigated and may lead to retraction of the published work.

2. Conflict of Interest Disclosures

To maintain transparency and objectivity, all authors, reviewers, and editors must disclose any potential conflicts of interest that could influence the outcome or interpretation of their work. Conflicts of interest may include, but are not limited to:

- Financial relationships (e.g., funding, employment, stock ownership).
- Personal relationships or competing interests that could affect the impartiality of the research.

Authors must include a **Conflict of Interest Statement** in their manuscript, even if no conflicts exist (e.g., "The authors declare no conflicts of interest"). Reviewers and editors must recuse themselves from handling manuscripts where conflicts of interest exist.

3. Data Availability and Sharing Policies

To promote transparency and reproducibility in research, ANUK Public Sector Accounting and Finance Journal (APSAFJ) encourages authors to share their data wherever possible. Our data sharing policy is as follows:

- **Data Availability Statement:** Authors must include a statement in their manuscript specifying whether and how the data supporting their findings are available. Examples include:
 - "The data supporting this study are available in [repository name, DOI or link]."
 - "The data used in this study are available upon reasonable request from the corresponding author."
- **Preferred Repositories:** Authors are encouraged to deposit their data in trusted repositories that provide DOIs or persistent identifiers (e.g., Dryad, Figshare).
- **Ethical Considerations:** Data involving human participants must comply with ethical guidelines and institutional requirements, including anonymization where necessary.
- **Open Data:** Where possible, authors should consider licensing their data under open terms (e.g., Creative Commons licenses) to facilitate reuse.

EDITORIAL POLICIES

1. Peer Review Process

At the ANUK Public Sector Accounting and Finance Journal (APSAFJ), we employ a rigorous peer review process to ensure the highest standards of scholarly integrity and quality in published research. Our peer review system is described below:

- **Type of Review:** We use a **double-blind peer review process**, where:
 - In **double-blind review**, both the authors and reviewers remain anonymous to each other to ensure impartiality.
- **Reviewer Selection:** Reviewers are selected based on their expertise in the subject matter of the manuscript.
- **Timeline:** The peer review process typically takes 10 – 20 days, depending on the complexity of the manuscript and reviewer availability.
- **Decision Criteria:** Editorial decisions are based on originality, methodological rigor, significance to the field, and adherence to ethical standards.

2. Publication Frequency

- **Frequency of Publication:** ANUK Public Sector Accounting and Finance Journal (APSAFJ) publishes on a **quarterly** basis, with issues released in June and December.
- **Special Issues:** In addition to regular issues, the journal occasionally publishes special issues on emerging topics of interest.

3. Copyright and Licensing

- **Copyright Policy:** APSAJ retains the copyright to the article submitted to the journal, the rights to publish and distribute their articles. The authors' rights include:
 - Reuse and redistribution of the published work.
 - Use of the work in academic and educational settings.
- **Licensing:** Articles are published under a **Creative Commons Attribution License (CC BY)**, which permits unrestricted use, distribution, and reproduction in any medium, provided the original author and source are credited.
 - License Details: Link to the specific license, e.g., CC BY 4.0.

4. Archiving Policy

To ensure long-term preservation and access to published content, ANUK Public Sector Accounting and Finance Journal (APSAFJ) has implemented robust archiving strategies, including:

- **LOCKSS (Lots of Copies Keep Stuff Safe):** A decentralized preservation system that ensures content remains accessible even in the event of a system failure.
- **CLOCKSS (Controlled LOCKSS):** Content is preserved in trusted digital archives for secure, long-term storage.
- **Institutional Repositories:** Articles are deposited in [specific repositories or institutional archives], ensuring perpetual access.
- **Self-Archiving Policy:** Authors are encouraged to deposit the published version of their articles in institutional or subject-specific repositories.

Our commitment to archiving ensures that your research remains accessible and discoverable for future generations.

5. Standard Journal Content Format

The standard format for content is as follows;

1. Introduction

2. Statement of Research Problem

3. Research Hypotheses or Objectives

*Review of Related Literature

4. Data Presentation & Analysis

5. Research Findings & Discussion of Findings

6. Conclusion, Recommendation & Policy Implication

TREASURY SINGLE ACCOUNT: IMPLEMENTATION, PROSPECT AND CHALLENGES IN JIGAWA STATE OF NIGERIA

ABDULHAYATU SARKI SULEIMAN
PUBLIC SECTOR ACCOUNTING
ANAN UNIVERSITY, Kwall Plateau State
08039739800

ABSTRACT

The paper examined the implementation and challenges of adopting Treasury Single Account (TSA) in Jigawa State-Nigeria. Data were collected from interviews conducted with relevant TSA stakeholders. The data was analysed using descriptive method. It was discovered that TSA in Jigawa state was implemented to some great extent. The reconciliation procedure difficulties and leakages of revenue arises because of the bureaucratic procedures, unwillingness of some MDAs to , inadequate banking infrastructure and inadequate manpower are some of the challenges of TSA full implementation in the state . It is recommended that Jigawa state should fully adopt the treasury single accounts as enlisted in the Central Bank of Nigeria guidelines. This will make the state to continue to serve as a state to learn from in Nigeria just like in the case of pension reforms and budget transparency in Nigeria. In addition, recruitment of qualified and adequate personnel and provision of adequate banking infrastructure will go along way in ensuring full implementation of TSA.

Keywords: Treasury Single Account, Adoption, Implementation

1.1 INTRODUCTION

Jigawa State implemented Treasury Single Account (TSA) since 2007 through the Integrated Financial Management Information System (IFMIS). IFMIS is a process of consolidating all the financial management information system of the Ministries, Departments and Agencies (MDAs) at one particular system. It allows for the generating of financial reports such as monthly, quarterly and annually at a glance. The federal government of Nigeria emulates the system from Jigawa state and introduce Government Integrated Financial Management Information System (GIFMIS).

The introduction of TSA could be traced to the executive order No.55 of 2011 where the central treasury was mandated to open a single treasury account in which to receive all remittances due to government from all revenue collecting agencies as well as other authorized government depository banks. Until the introduction of TSA in Nigeria, MDA's which generate revenue, have the multiplicity of accounts in commercial banks, used part of the revenue generated to fund their operations and then remit the surplus to the federation account. As a result, agencies pay into government account what they deem fit. Under this situation, some ministries became richer than a government. The result of this situation includes leakages of funds, embezzlement of

public funds, and the inability of a government to know the exact amount in its account.

In 2012 the federal government adopted the Treasury Single Account (TSA) as part of its efforts towards mainstreaming e-government into its administrative processes and a strategy to enhance the efficiency of revenue collection and management. It has been described as "a bank account or a set of linked bank accounts through which the government transacts all its receipts and payments and gets a consolidated view of its cash position at the end of each day". To ensure that the benefits of the TSA trickled to the sub-national units (the states and the local government), the Central Bank of Nigeria in 2016 published a Guideline for the adoption of TSA at the state level. Thus, the aim of this study is to examine the implementation and challenges of adoption of Treasury Single Account (TSA) in Jigawa State, Nigeria. The specific objectives of the study are to:

- i. examines the impact of implementation of Treasury Single Account (TSA) in Jigawa State-Nigeria.
- ii. assess the prospects of Treasury Single Account (TSA) in Jigawa State-Nigeria.
- iii. evaluates the challenges of Treasury Single Account in Jigawa State, Nigeria.

Based on the above objectives, the study raises and intends to provide answer to the understated questions:

- i. What is the impact of implementations of Treasury Single Account (TSA) in Jigawa State-Nigeria?
- ii. What are the prospects of Treasury Single Account (TSA) in Jigawa State-Nigeria?
- iii. What are challenges of Treasury Single Account in Nigeria?

2.0 LITERATURE REVIEW

2.1 The Concept of Treasury Single Account (TSA)

Treasury Single Account (TSA) is a financial management policy aimed at consolidating government funds into a single account or a set of linked accounts maintained by the central bank. This approach is intended to enhance transparency, improve cash management, and minimize inefficiencies in government financial operations. Kanu (2016) views TSA as one of the financial policies implemented by the federal government of Nigeria to integrate all revenues and treasuries from all ministries, departments and agencies and extra ministerial departments in the country where all the collections are paid into money depositing banks trailed to a single account at the apex bank of the nation (CBN).

According to Iloeje and Okwo (2022), the Treasury Singly Account (TSA) is a public accounting system that collects all government revenues, receipts, and income into a single account collected by the central bank. In a nut shell, the Treasury Single Account (TSA) is a unified structure of government bank accounts that allows for the consolidation and effective utilization of government cash resources. Thus, the introduction of TSA was expected to reduce the multiplicity of bank accounts previously maintained by various MDAs, thus, ensuring transparency and accountability in all organs of the government. TSA is one of President Muhammadu Buhari's outstanding initiatives for combating public sector corruption, accountability, financial discipline, and financial management in Nigeria (Ivangu et al., 2020). Corruption's impact on economic progress cannot be overstated. According to Olayemi (2021), the primary impact of corruption is that it causes a drop in economic development and improvement by lowering the moral motivators to invest; it also causes a divestment in such economy.

The introduction of Treasury Single Account is as a result of numerous corrupt practices that

exist in Nigeria, such as lack of transparency and accountability (Kanu, 2016). The policy was introduced to reduce the proliferation of bank accounts operated by Ministries, Departments and Agencies (MDAs) and also to promote transparency and accountability among all organs of the government (Fatile & Adejuwon, 2017). Treasury Single Account is a useful tool to establish centralized control over its revenue through effective cash management. It enhances accountability and enables government to know how much is accruing to its accounts on a daily basis. It is a financial tool that unifies all government accounts in a single pool for effective cash management (Odewole, 2016). TSA is believed to be an efficient and effective means of managing government revenue generation and system that provide and enforce sufficient self-control mechanism on revenue generation and budget implementation using a daily return from account balances of various MDAs into a central account (Adebisi & Okike, 2016).

Tayo (2015) points out that by implementing the TSA, the Federal Government, through its independent revenue e-collection initiative, hopes to automate direct revenue collection from the existing MDAs. All revenues collected would be paid directly into the Consolidated Revenue Fund (CRF) account at the CBN through a designed platform (Remita e-collection platform) and several other electronic payment platforms or channels that may be introduced by the government from one to time. In fact, TSA is seen as a structure that unifies government bank accounts that gives an amalgamated or integrated view of government's cash resources (Yusuf & Chiejina, 2015). The institutionalization of TSA helps the money depositing banks over their proliferated and chain of activities which they perform. It includes: disbursements of funds and collection of taxes/levies as well as remuneration of civil servants. Some substantive governments' agencies maintain proliferated bank accounts in the collection and expensing of revenues, thereby disregarding the provision of the constitution which requires the remittance of all the revenue into one account.

The CBN kept and maintained a Consolidated Revenue Account to receive all revenue of the government from all sources as well make payments through this account. All MDAs and extra ministerial departments are required to remit money collected in this account through the Deposit Money Banks (DMBs) who are the collection agents. Although, DMBs will still keep revenues account for MDAs and extra

ministerial departments but all the treasuries collected by the money depositing banks shall be paid to the CRF maintained with the CBN daily. Also, ministries, departments and agencies and extra ministerial departments cash balance with the money deposit banks will have nil balance daily by remitting all the treasuries collected to the TSA. This as a result restricts money depositing banks from having access to multiple deposits resulting from multiple accounts (Kanu, 2016).

2.2 Implementation of Treasury Single Account (TSA)

The implementation of the Treasury Single Account has been pursued by several countries, including Nigeria. In Nigeria, the implementation of the Treasury Single Account began in 2012 as part of efforts to reform public financial management and reduces leakages in government revenue. The primary objectives of the TSA implementation in Nigeria were:

Consolidation of Government Funds: Previously, government funds were held in numerous accounts across various commercial banks, making it difficult to track and manage funds effectively. The TSA aimed to consolidate these accounts into a single account at the Central Bank of Nigeria.

Enhanced Cash Management: The TSA was expected to centralize cash resources, enabling the government to manage its cash flow more efficiently and reduce idle funds in various accounts.

Transparency and Accountability: By centralizing government funds, the TSA aimed to improve transparency and accountability in the management of public funds. This centralization would make it easier to monitor cash flows and prevent unauthorized transactions.

Reduction of Borrowing Costs: With a consolidated cash position, the government could better manage its short-term borrowing needs, potentially reducing borrowing costs.

Reduction of Leakages: The TSA was intended to minimize leakages and the diversion of government funds, thereby improving the overall efficiency of government financial operations.

2.3 Prospects of Treasury Single Account (TSA)

The adoption and full implementation of Treasury Single Account (TSA) by any government, especially in a dwindling economy cannot be over-emphasized. This is due to the

fact that a Treasury Single Account is primarily to ensure accountability of government revenue, enhance transparency and avoid misappropriation of public funds (Ekubiat & Ime, 2016). With the adoption of TSA, government will borrow less and therefore the debt servicing cost should reduce drastically to probably less than half of the current level. It is also likely that a lot of funds previously unaccounted for will be uncovered.

One major issue in the past was that many banks delayed the remittance of revenue collected on behalf of government in order to temporarily trade with the money at the expense of government (Yusuf et al., 2015). They noted further that TSA should also provide some transparency around unspent budgetary allocation which can be carried forward to another year. I have always wondered why we have low budget executions (sometime 60% or less) and yet we begin every budget year on the basis of zero revenue. TSA would facilitate transparent reporting of tax revenue and pave the way for tax offsetting and faster payment of refunds. The consolidation into a TSA paves way for the timely capture and payment of all due revenues into government coffers without the intermediation of multiple banking arrangements. This prevents revenue leakages in terms of revenue loss and mismanagement by operators of all revenue-generating agencies (Onyekpere, 2015). If TSA is properly implemented, agencies of government will spend in line with duly approved budget provisions. The maintenance of a single account for government will enable the Ministry of Finance monitor fund flow as no agency of government is allowed to maintain any operational bank account outside the oversight of the ministry of finance.

The primary benefit of a Treasury Single Account is to provide for proper monitoring of government receipts and expenditure. In the Nigerian case, it will help to block most, if not all, the leakages that have been the bane of the economy. We have a situation where some Ministries, Departments, and Agencies manage their finances like independent empires and remit limited revenue to government treasury. Under a properly run Treasury Single Account, it cannot be possible, an agencies of government are meant to spend in line with duly approved budget provisions (Kanu, 2016 and Tayo, 2015). In Nigeria, it is expected that the implementation of TSA will help tame the tide of corruption of financial leakages and embezzlement. The implementation of Single Treasury Account (TSA) is expected to block revenue leakages

within the government parastatals as the Ministry of Finance will be able to monitor the inflows and out flows, hence, augment the reduction in oil revenue due to falling oil prices. TSA will help to block most if not all the leakages that have been the bane of the growth of the economy.

Also, the institutionalization of TSA will impact positively on the national economic planning, budget and budgetary processes and procedures; bring irregularities and loopholes in the MDAs and extra ministerial departments to its lowest point, albeit economic planning and budget making on government (Ofor et al., 2017).

2.4 Challenges of Treasury Single Account in Nigeria

Despite the fact that TSA enhances the overall effectiveness of a financial management system, there are some challenges facing the implementation of TSA in Nigeria. As observed by Odia and Odia (2016), some of these challenges include; the skepticism by States and opposition party to TSA. The TSA coverage is still limited and has not yet been extended to most States and local governments. This would certainly limit the effectiveness of the TSA. Again, the National Assembly has also exempted itself from TSA compliance. Secondly, the ailing economy and hard times owing to the dwindling revenues available for public spending by the various tiers of government present a daunting challenge. Most of the State governments are beginning to realize the need to cut down on waste and restless spending. Thirdly, the negative attitude and complete lack of support by the MDAs for the TSA policy through instilling fiscal discipline, clearing and prudent spending. Fourthly, there are fears by some MDAs resisted to key-in adducing reasons of their peculiarities.

Academic Staff Union of Universities (ASUU) has criticized Treasury Single Account (TSA) policy, that it constitutes bottlenecks in the smooth running of the Nigerian University System if hurriedly implemented. ASUU believed that financial autonomy that the TSA takes away is very crucial for effective functioning of university system. It has also been observed that commercial banks stand to lose immensely from the implementation of TSA. Speaking during the National Executive Council (NEC) Meeting of the union held in Owerri, the former ASUU National President, Dr. Nasir I. Fagge, pointed that the Federal Government need to ponder further on the TSA policy (Ofor et al., 2017).

This is because of the fact that public sector funds constitute a large chunk of commercial banks deposit. Indeed, it is estimated that commercial banks hold about ₦2.2 trillion public sector funds at the first quarter of 2015 (Utsu et al., 2016). As a result, most banks will have to downsize to cut their recurrent expenditures. Banks will continue to device means of mobilizing funds from the private sector. We see a return of the era when women are employed by banks specifically for deposit mobilization and tacitly encouraged to use any means necessary to get funds. We see increase in deposit interest rates as a major means of inducing customers and most importantly we see a drop in lending and in the profitability of banks, at least, in the short to medium term until they fully come to terms with the impact of the policy and begin to properly position themselves for true banking business.

Despite these challenges, the implementation of the Treasury Single Account in Nigeria brought about positive changes in the management of government finances. It improved transparency, reduced leakages, and provided a more accurate picture of the government's cash position. However, ongoing efforts were required to address challenges and optimize the benefits of the TSA system.

In summary, the implementation of the Treasury Single Account in Nigeria was not without challenges. Some of these challenges can be summarize as follow:

Operational Challenges: Transitioning from a decentralized account structure to a centralized TSA required significant changes in processes, procedures, and systems. This transition was not always seamless and required adjustments.

Technological Infrastructure: Upgrading technological infrastructure to support the implementation of the TSA was a significant undertaking. This included setting up a robust financial management information system to effectively manage and monitor the consolidated funds.

Resistance to Change: Different government agencies and stakeholders were accustomed to their existing account structures and processes. Resistance to change and concerns about the potential impact on agency autonomy were issues that needed to be addressed.

Liquidity Management: While the TSA aimed to improve cash management, there were challenges in effectively managing the government's cash balances, particularly in

situations where there were fluctuations in revenue inflows and expenditure patterns.

Legal and Regulatory Framework: Adapting legal and regulatory frameworks to accommodate the new TSA system required careful consideration and adjustments.

2.5 Empirical Review

This section provides empirical relevant to this study based on the findings of previous studies conducted. Iloje et al. et al. (2022) assessed the impact of Treasury Single Account (TSA) on the public finance management in Nigeria. The study investigated how the implementation of TSA in Nigeria affected revenue collection, public cash management, federation account allocation and corruption control in Nigeria. The paper used secondary data collected from Central Bank of Nigeria statistical bulletin and transparency international from 2010-2014 (pre adoption period) to 2015-2019 (post-adoption period). T-test statistical technique was employed to analyze the data. The findings of the study revealed that TSA has a negative and insignificant effect on government revenue, public cash management, federal account allocation, as well as corruption control in Nigeria.

Ivangu et al. (2020) investigated the impact of TSA on public sector corruption in Nigeria using Transparency International data from 2012 to 2014 (pre-TSA) and 2016 to 2018 (after TSA adoption). Data were analyzed using descriptive statistics and paired samples t-tests. The analysis found no substantial change in Nigeria's corruption perception index before and after TSA. Osagioduwa (2019) examined how TSA policy combats public sector corruption in Nigeria. The study sampled 264 respondents and utilized a structured questionnaire to collect primary data. Descriptive statistics analyzed the data. The study found that TSA policy combats corruption in Nigeria's public sector and improves public sector company administration. The study recommends adopting TSA strategy across government.

Gbegi et al. (2019) examined the effect of TSA implementation on accountability, transparency, and public financial management in Nigeria from the perspectives of accounting professionals (AP), academics, and officers (AO). From 790 AP, AA, and AO in Benue State, 266 were selected. Data analysis employed chi-square goodness of fit. TSA implementation has improved accountability, transparency, and public money management in Nigeria, the study found. Onyemowo et al. (2019) examined how the Treasury Single Account

affects Nigeria's revenue generation cost. Using a survey study, they collected data from 389 personnel of the Accountant General's Office, Auditor General's Office, Central Bank of Nigeria, and Federal Ministry of Finance. Linear regression was used for data analysis. TSA significantly raises revenue-generating costs in the study.

Ofor et al. (2017) examined the effect of Treasury Single Accounts (TSA) on the performance of Ministries, Departments and Agencies (MDA) in Nigeria. The study relied basically on primary data which was obtained through questionnaire designed and administered to 75 respondents drawn from the federal government Ministries, Departments, Agencies and Parastatals (MDA) within Anambra metropolis in the eastern part of Nigeria. Analysis was based on the Wilcoxon sign test. The result of this research indicates that the institutionalization of TSA has significantly affected and improved the performance of federal government MDAs. This implies that TSA is capable of blocking financial loopholes in revenue generation and promoting transparency and accountability. In the same vein, since the adoption of TSA, the performance of Federal Government Ministries, Departments and Agencies (MDAs) in Nigeria has significantly improved.

Jegede (2015) states in his study that majority of the MDAs and extra ministerial departments are against the TSA due to the fear of not having a control of monies they lodged in the bank account of their choices and that some agencies lodged the revenue they collected in fixed deposit accounts where huge interests are accrued. Kanu (2016) in his study on the effect of TSA implementation on liquidity and performance of banks note that the implementation of TSA in the public accounting system impacted negatively on the banks liquidity base and the performance of banking sector in Nigeria. Also the study of Isaac (2015) found similar finding with Kanu that the adoption of TSA has no significant effect on the Nigerian economy. This is contrary to the recent study of Yusuf (2016) on the effect of TSA on public finance management in Nigeria who argues that the adoption of a TSA is capable of plugging financial loopholes, promoting transparency and accountability in the public financial system. Also, the recent study of Ahmed (2016) on TSA as an instrument for financial management prudence concludes that the system of TSA requires political will, honesty and determination so as to overcome the various challenges bewildered against it and that

where all these are met, TSA turns to instrument for financial prudence and management.

3.0 METHODOLOGY

The study utilized survey method. Data for the study were collected from interview conducted with staff of Jigawa State Ministry of Finance consisting of the Accountant General of Jigawa State, Director Treasury and Jigawa State Board of Internal Revenue staff. The data were analyzed using descriptive method.

4.0 FINDINGS

This section presents the results of the data collected from the interview collected from the respondents in the state.

4.1 Revenue accountability in Jigawa

The revenue account is domiciled in Zenith Bank and linked to TSA. The single account from Zenith can be viewed centrally. All the revenues are paid to the account including those from the Hospitals and Tertiary Institutions. Revenue are collected through Direct deposit, Point of Sales, and other online platform such as Remita and pay direct. Payments are made by bank transfer to the beneficiaries. Jigawa state is one of the low ranked State in term of internal revenue generation in the country and relies heavily on the allocation from the Federation account. PAYE, Direct Assessment, Road taxes, Land charges, Collections from MDAs and School fees are the major sources of revenue of revenue of the state.

4.2 Challenges of TSA Implementation in Jigawa State

Some of the challenges of implementing the TSA particularly in adopting the digital technology which will aid the adoption of TSA include:

Unwillingness to transfer the MDAs' funds in their trust to the TSA on time, the revenue generating agencies especially hospitals are not willing to transfer the funds generated to the government account. They complained that the 48 hours requirement for them to claim the 90% of their collection is affecting their operations.

Inadequate banking infrastructure. There are many local governments that lack banking infrastructure. In fact some of the local governments have just one bank operating. Apart from Dutse, the state capital that have the required banking infrastructure most of the local

governments lack the banking infrastructure.

Shortage of trained/skilled personnel etc.), the state requires adequate and skilled personnel for the adoption of digital finance technologies in tax administration. The shortage of skilled personnel negatively affects the adoption of digital finance technology in tax administration in the state.

Inadequate IT infrastructure. The IT infrastructure is inadequate. This seriously affects the adoption of digital finance technologies in tax administration.

Lack of requisite manpower. Many of the staff in the state civil service have retired especially those that transferred their service from Kano State to Jigawa State after its creation. There is an embargo on employment for years in the state. Hence, the need for recruitment of more staff. In addition, the system reduces the level of employment opportunities by centralizing the activities at one point

The reconciliation procedure difficulties and leakages of revenue arises because of the bureaucratic procedures

4.3 Impact of Treasury Single Account on Accountability

The adoption of TSA has enabled the state government to know the total collections of all the revenue collecting units at all times. Unlike before when those units only declare what they desire, the current system (TSA) disallow such practice.

TSA has help in harmonization of revenue collection procedure which result in boosting the revenue generation of the state. The system has also simplifies the procedure for the preparation of financial reports, reduces the level of multiple taxation and allow the government to monitor at a glance and supervise the revenue generation at the state.

5.0 CONCLUSION AND RECOMMENDATIONS

The implementation of TSA in Jigawa state has help in transparency and accountability of revenue of the state. The adoption in Jigawa is not complete and requires improvement. The adoption showed revenue growth and also have attracted grant to the state. Performance of each of revenue units is known following the adoption

of TSA through the monthly returns. Unlike before the adoption where the revenue generating units only declare what they wish. It is recommended that Jigawa state should fully adopt the treasury single accounts as enlisted in the Central Bank of Nigeria guidelines. Doing that will make the state to continue to serve as a state to learn from in Nigeria just like in the case of pension reforms and budget transparency in Nigeria. In addition, recruitment of qualified and adequate personnel and provision of adequate banking infrastructure will go a long way in ensuring full implementation of TSA.
